**FOOTE IT NEWS ANALYSIS – Technology employment trends in the  
 July 2012 Bureau of Labor Statistics United States Employment Report**

**Largest monthly expansion of IT labor force in more than three years as  
 18,200 workers are added to payrolls in July.**

**Telecommunications industry post first monthly job gain since November 2010.**

**Vero Beach, FL – Tuesday, August 7, 2012.** An analysis of Friday’s release of July 2012 U.S. employment numbers by the Department of Labor Bureau of Labor Statistics (DOL/BLS) reveals a net gain of 18,200 jobs across four jobs segments commonly associated with IT professionals---the largest monthly IT employment increase since 2008. (see **Figure 1**)

4,900 new IT jobs were added in two job segments, *Telecommunications* and *Data Processing, Hosting and Related Services*, notable because this is the first monthly net job gain in these categories since November 2010. This excludes a Sept 2011 anomaly involving tens of thousands of telecomm workers returning to work last summer following a nationwide labor dispute in August.

In other IT related job segments 13,300 additional jobs were added in July in *Management and Technical Consulting Services* and *Computer Systems Design/Related Services* which have been enjoying robust employment expansion for more than two years: job growth in these two segments has totaled 242,000 in the past 24 months. (see **Figure 2**)

“The overall employment situation in the United States is lackluster, in fact this is the fifth consecutive month of subpar results. But the fact that more than 18,000 jobs were created last month for people with significant IT skills and experience---and nearly 57,000 new jobs added in the past three months--is incredibly good news,” says David Foote, CEO at IT analyst firm Foote Partners which has been tracking and reporting on IT and business labor trends since 1997, including monthly analyses of the DOL’s employment reports.

“The bottom line is that IT professionals are desired and being hired, momentum has been consistently building over more than two years, and it is paying dividends at a time when the national employment situation is very precarious. Businesses are transforming themselves, shifting to new business models and incorporating cloud computing, mobile platforms, Big Data analytics, new architectures and business processes, and adding new technologies and tools. But not all IT workers are benefitting from the expansion of IT employment segments,” warns Foote. “Many companies are looking for superstars and workers we refer to as ‘walking Swiss Army knives’ ---those with the right mix of technology, business, and people skills to handle some very tough jobs. It could also be unique combinations of pure tech skills. So despite IT job expansion, the nature of demand for labor today is that too many jobs requisitions require skills and skills combinations that are elusive to large numbers of unemployed and underemployed IT professionals. But these are exactly the kind of people employers should be searching for innovating and inventing their futures.”

### **Overall U.S. Employment Report**

The U.S. unemployment rate inched up one-tenth of a point to 8.3 percent in July with the payrolls increasing by 163,000 jobs, nearly twice the job growth of the previous month.

The number of long-term unemployed people (defined as 27 or more months) declined by 200,000, to 5.2 million or 40.7% of all unemployed workers (**Figure 3**)

Those employed part-time for economic reasons stayed the same at 8.2 million, the highest since February’s jobs report. (**Figure 3**)

“Discouraged workers”, or those who have given up looking for jobs, decreased by 31,000 workers in July while those “marginally attached” to the labor force ---defined as individuals that were not in the labor force, wanted and were available for work and had looked for a job sometime in the prior 12 months---stayed basically the same (2.5 million workers). They are not counted as unemployed because they had not searched for work in the 4 weeks preceding the survey. **(Figure 4)**

Professional and business services once again led all sectors in job gains, with 49,000. Within leisure and hospitality, employment in **food services and drinking places** rose by 29,000 over the month and by 292,000 over the past 12 months. **Manufacturing** employment rose in July (+25,000), with nearly all of the increase in durable goods manufacturing. Within durable goods, the motor vehicles and parts industry had fewer seasonal layoffs than is typical for July, contributing to a seasonally adjusted employment increase of 13,000. Employment continued to trend up in fabricated metal products (+5,000).

Employment continued to trend up in **health care** in July (+12,000), with over-the-month gains in outpatient care centers (+4,000) and in hospitals (+5,000). Employment also continued to trend up in **wholesale trade**.

**Utilities** employment declined in July (-8,000). The decrease reflects 8,500 utility workers who were off payrolls due to a labor-management dispute.

Employment in other major industries, including **mining and logging, construction, retail trade, transportation and warehousing, financial activities, and government**, showed little or no change over the month.
